

■ EXPERIENCE COUNTS

With a combined 50 years of residential & commercial construction and renovation experience you can be assured that you will receive a comprehensive, professional home inspection by an inspector that has **"HANDS ON"** experience.

Along with experience and training, your certified inspector also has the latest tools available for evaluating all areas & components of your home.

Problems identified can be as simple as peeling paint or as complex as major structural problems.

Our inspections conform to the Standards of Practice of The National Association of Certified Home Inspectors (NACHI).

On Site Inspections carries Business, Liability & Realtor® coverage insurance. All employees are fully insured for Liability & Worker's Compensation claims.

■ THE INSPECTION

The actual inspection will take between 2 and 4 hours.

We encourage our clients to be at the home during the inspection. This will enable you to see first-hand, areas of the home that may be deficient.

Your inspection will include preliminary testing for CO, Water Pressure, Water Purity and Gas Leaks. We also offer, at an additional cost, testing for a wide variety of potential problems.

■ THE INSPECTION REPORT

Using our exclusive software, your inspector will complete a comprehensive report at the end of the inspection.

The report will contain evaluations of all the rooms and major systems and components of your house including: HVAC, Plumbing, Electrical, Foundation, Roof etc.

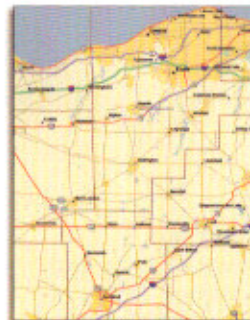

Upon completion of the inspection your inspection report will be printed and each area will be reviewed with you by your inspector. This is a great time to ask your inspector any questions or for clarification on any item in the report.

During the inspection your inspector may photograph areas that are of concern. Some of these photographs will be included in the final report.

■ SERVING NORTH CENTRAL OHIO

We service the following Ohio Counties:

**Erie
Huron
Richland
Lorain
Ashland
Cuyahoga
Summit
Stark
Medina
Wayne**

Inspection & report results are based on observable conditions existing at the time of inspection only. Although every effort is made to provide an all-inclusive inspection, results furnished are a "professional opinion" and may not reveal all latent problems & defects.
